I disclose the following financial relationship(s) with a commercial interest:

- Novo Nordisk (Advisory Board)
- GenFit (consultant)
- Nestle Nutrition Institute (independent educational grant, no personal fees)
- Axcella Health, Inc (independent research funding)
- Lipocene (clinical trial site PI)

40 year old obese
woman with
hepatic steatosis on
ultrasound

*“It looks like you have
fat in your liver on u/s.”*

*“What does that mean? Is
this something I need to
worry about?”*

Non-alcoholic fatty liver disease

The Basics

1 in 2

1 in 4 people

in the U.S. have NAFLD.

30% increased risk of death

(vs. general population)

Fibrosis is a potent predictor of death

Dulai, Hepatol 2017

Prevalence of advanced fibrosis in general population (0.9-2%)

Harrison, J Hepatol 2021

Wong, Gut 2012

Harris, Lancet Gastroenterol Hepatol 2017

Kang, Aliment Pharmacol Ther 2020

AASLD and AGA recommend screening in populations at high risk for advanced fibrosis

Rinella, *et al*
Hepatology 2023.

Kanwal, *et al*
Gastroenterology 2021.

RISK FACTORS

DIABETES

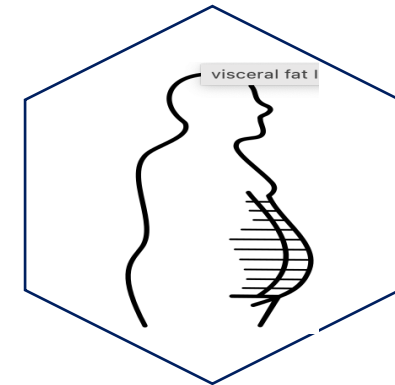

OBESITY

HYPERTENSION

DYSLIPIDEMIA

INSULIN RESISTANCE

Primary screening for fibrosis : use a non-invasive testing method

Step 3: Non-invasive testing (NIT) for fibrosis^{2,3}

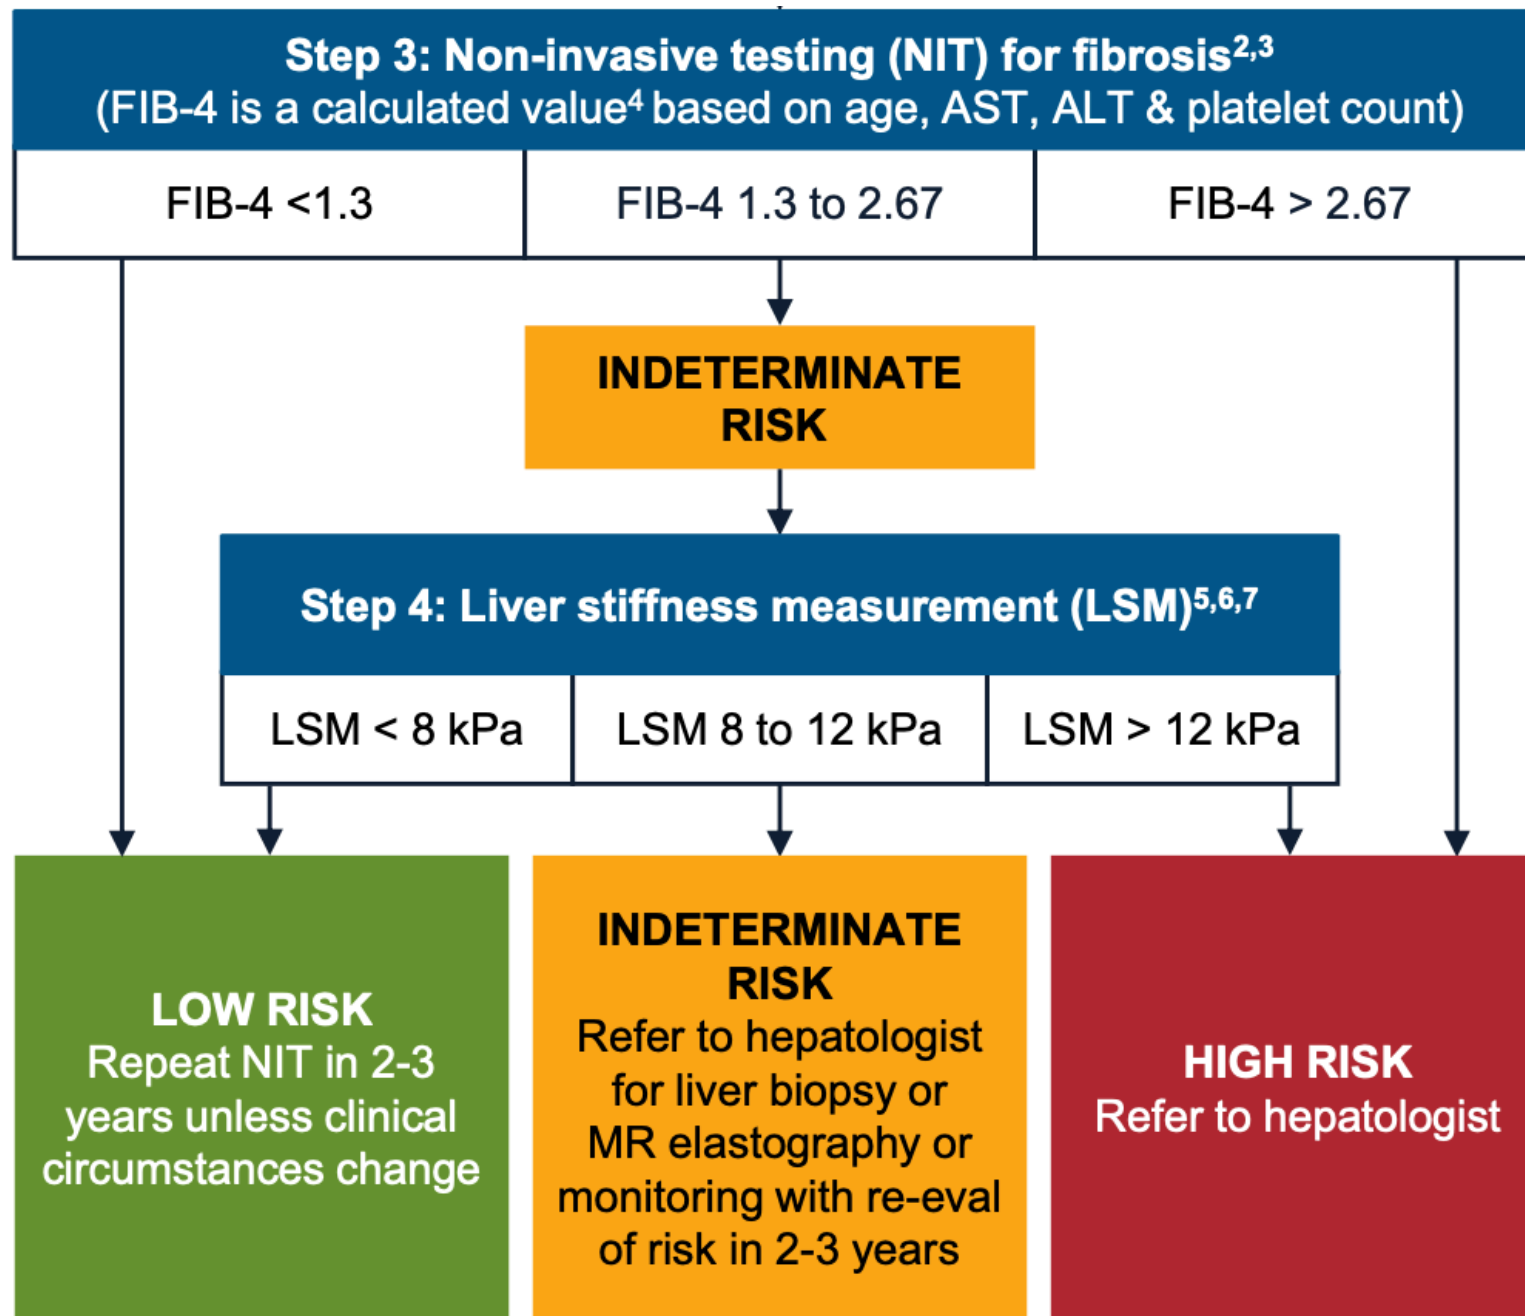

(FIB-4 is a calculated value⁴ based on age, AST, ALT & platelet count)

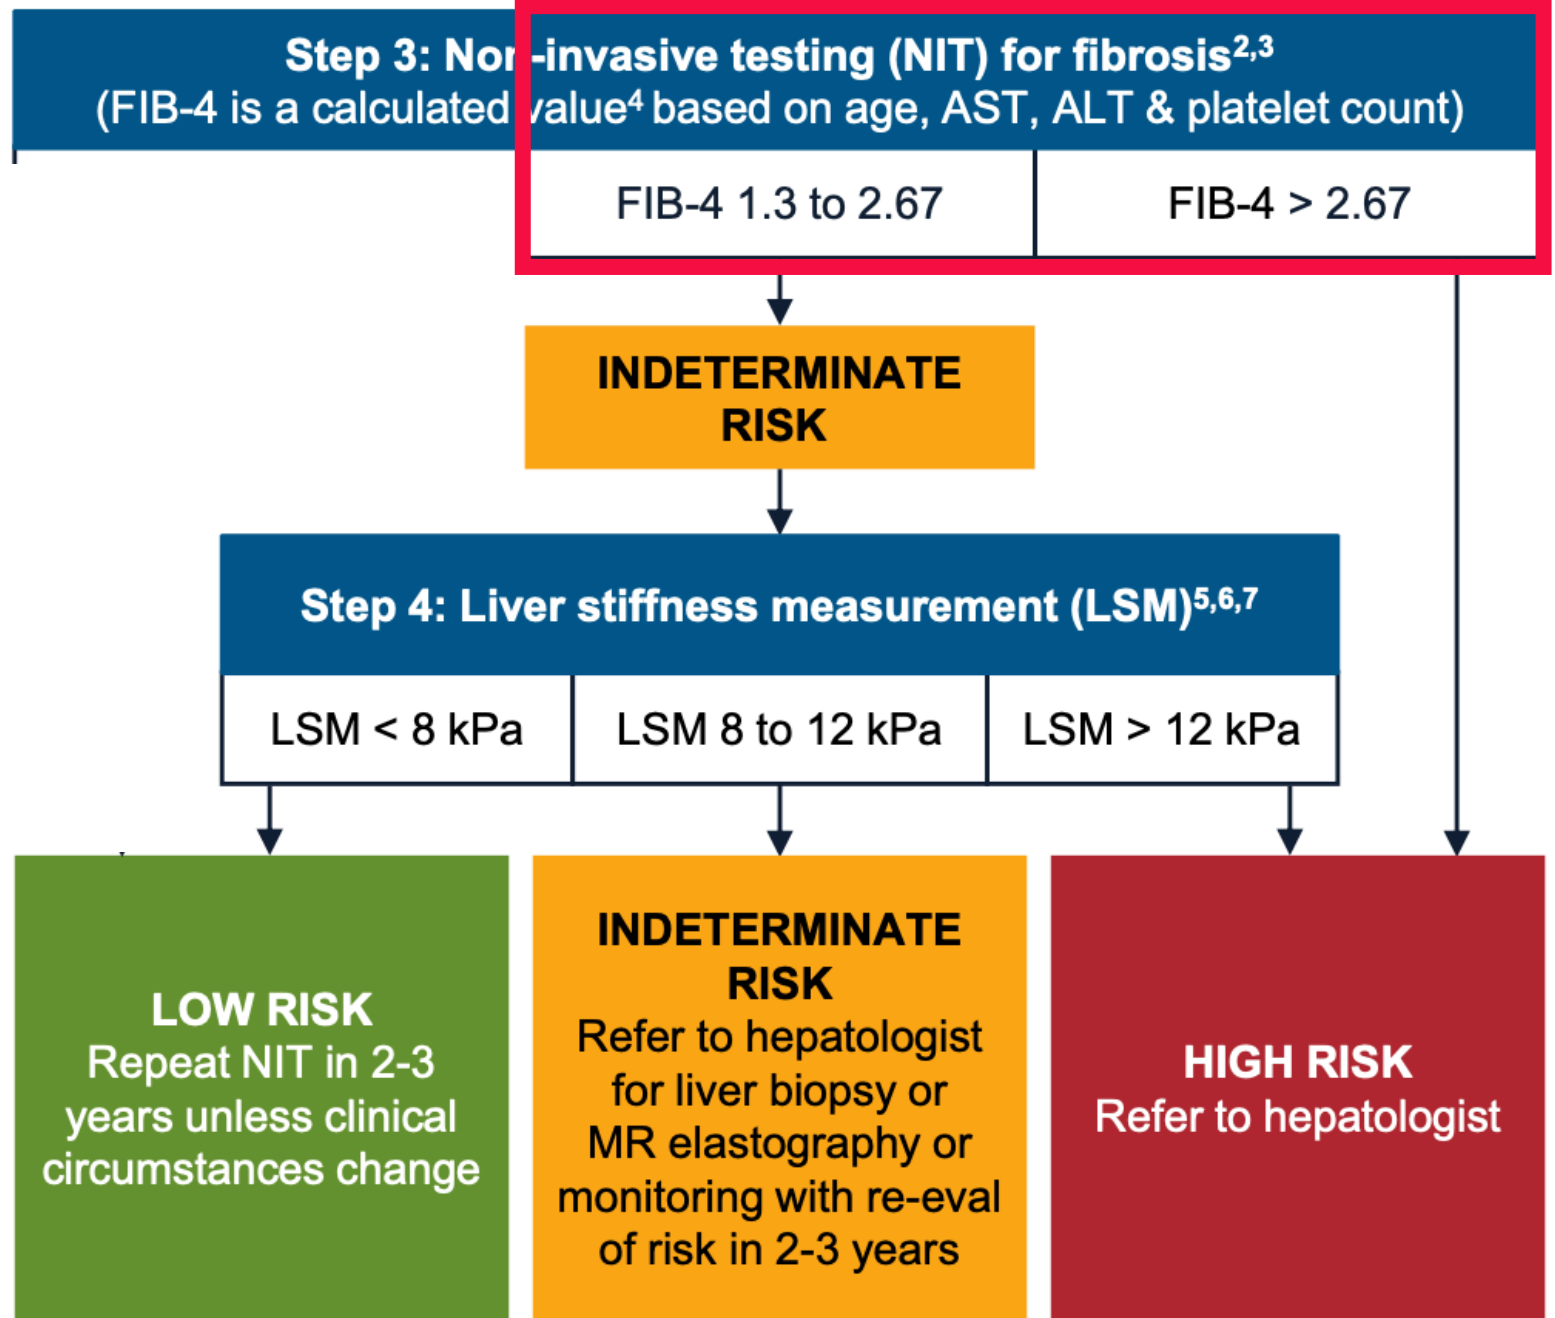

FIB-4 <1.3

FIB-4 1.3 to 2.67

FIB-4 > 2.67

2. For patients 65+, use FIB-4 ≤ 2.0 as the lower cutoff.
3. Other NITs derived from routine labs can be used instead of FIB-4.
4. Many online FIB-4 calculators are available.

Step 3: Non-invasive testing (NIT) for fibrosis^{2,3}
(FIB-4 is a calculated value⁴ based on age, AST, ALT & platelet count)

FIB-4 1.3 to 2.67	FIB-4 > 2.67
-------------------	--------------

INDETERMINATE RISK

Step 4: Liver stiffness measurement (LSM)^{5,6,7}

LSM 8 to 12 kPa	LSM > 12 kPa
-----------------	--------------

Hepatologist

<p>INDETERMINATE RISK</p> <p>Refer to hepatologist for liver biopsy or MR elastography or monitoring with re-eval of risk in 2-3 years</p>	<p>HIGH RISK</p> <p>Refer to hepatologist</p>
---	--

Management of NAFLD/NASH based on patient's risk

	LOW RISK FIB-4 < 1.3 or LSM < 8 kPa or liver biopsy F0-F1	INDETERMINATE RISK FIB-4 1.3 - 2.67 and/or LSM 8 - 12 kPa and liver biopsy not available	HIGH RISK¹ FIB-4 > 2.67 or LSM > 12 kPa or liver biopsy F2-F4
	Management by PCP, dietician, endocrinologist, cardiologist, others	Management by hepatologist with multidisciplinary team (PCP, dietician, endocrinologist, cardiologist, others)	
Lifestyle intervention ²	Yes	Yes	Yes
Weight loss recommended if overweight or obese ³	Yes May benefit from structured weight loss programs, anti-obesity medications, bariatric surgery	Yes Greater need for structured weight loss programs, anti-obesity medications, bariatric surgery	Yes Strong need for structured weight loss programs, anti-obesity medications, bariatric surgery
Pharmacotherapy for NASH	Not recommended	Yes ^{4, 5, 6}	Yes ^{4, 5, 6, 7}
CVD risk reduction ⁸	Yes	Yes	Yes
Diabetes care	Standard of care	Prefer medications with efficacy in NASH (pioglitazone, GLP-1 RA)	Prefer medications with efficacy in NASH (pioglitazone, GLP-1 RA)

Therapeutic Options for NAFLD

**Liver-specific
medications**

**Weight-loss
medications**

**Metabolic
bariatric
surgery**

Medication	FDA Indication	Population	Clinical Benefits	Potential Side Effects	Cardiac Benefit
Vitamin E (rrr-alpha) 800 IU daily ^(379, 488)	N/A	NASH without T2DM or cirrhosis	Improves steatosis NASH resolution? No proven benefit on fibrosis	Hemorrhagic stroke ? risk of prostate cancer	No
Pioglitazone 30-45mg po daily (387, 390, 489)	T2DM	NASH with and without T2DM	Improves steatosis, activity and NASH resolution Fibrosis improvement? Improves insulin sensitivity Prevention of diabetes CV risk reduction and stroke prevention	Weight gain Risk of heart failure exacerbation Bone loss post-menopausal women	Yes
Liraglutide* 1.8mg SC daily (T2DM) 0.6-3mg SQ daily (obesity) (404)	T2DM Obesity	NASH without cirrhosis	Improves steatosis No proven impact on fibrosis	Gastrointestinal Gallstones (related to wt)	Yes
Semaglutide † 0.4mg SC daily 0.25-2.4mg SQ w (405)			Improvement in insulin sensitivity Weight loss Improves CV and renal outcomes Stroke prevention	Pancreatitis	Yes
Tirzepatide (406, 407)	T2DM Obesity	T2DM or Obesity with NAFLD	Reduces steatosis on imaging Improvement in insulin sensitivity Significant weight loss	Gastrointestinal Gallstones related to wt loss Pancreatitis	Unknown
SGLT2i (409, 413, 414)	T2DM	T2DM and NAFLD	Reduction in steatosis by imaging May improve insulin sensitivity Improves CV and renal outcomes Modest weight loss	Risk of genitourinary yeast infection, volume depletion Bone loss	Yes

None are FDA-approved for the indication of NASH at this moment

Back to our patient

8:42

FIB-4 Index

CALCULATOR NEXT STEPS EVIDENCE CREATOR

Noninvasive estimate of liver scarring in HCV and HBV patients, to assess need for biopsy.

When to Use ▾ Pearls/Pitfalls ▾ Why Use ▾

Age years
Use with caution in patients <35 or >65 years old, as the score has been shown to be less reliable in these patients

AST U/L
Aspartate aminotransferase

Age: 40 years

AST: 35

ALT: 30

Plt: 234

RESULT

1.09 points Advanced fibrosis excluded

Step 3: Normal
(FIB-4 is a calculated

FIB-4 <1.3

LOW RISK
Repeat NIT in 2-3
years unless clinical
circumstances change

Management of NAFLD/NASH based on patient's risk

	LOW RISK FIB-4 < 1.3 or LSM < 8 kPa or liver biopsy F0-F1	INDETERMINATE RISK FIB-4 1.3 - 2.67 and/or LSM 8 - 12 kPa and liver biopsy not available	HIGH RISK¹ FIB-4 > 2.67 or LSM > 12 kPa or liver biopsy F2-F4
	Management by PCP, dietician, endocrinologist, cardiologist, others	Management by hepatologist with multidisciplinary team (PCP, dietician, endocrinologist, cardiologist, others)	
Lifestyle intervention ²	Yes	Yes	Yes
Weight loss recommended if overweight or obese ³	Yes May benefit from structured weight loss programs, anti-obesity medications, bariatric surgery	Yes Greater need for structured weight loss programs, anti-obesity medications, bariatric surgery	Yes Strong need for structured weight loss programs, anti-obesity medications, bariatric surgery
Pharmacotherapy for NASH	Not recommended	Yes ^{4, 5, 6}	Yes ^{4, 5, 6, 7}
CVD risk reduction ⁸	Yes	Yes	Yes
Diabetes care	Standard of care	Prefer medications with efficacy in NASH (pioglitazone, GLP-1 RA)	Prefer medications with efficacy in NASH (pioglitazone, GLP-1 RA)

“What does that mean? Is this something I need to worry about?”

“Good news. You are at low risk for having significant scarring of your liver. The main treatment for fatty liver disease is weight loss. Just eat less and exercise more.”

Behavioral
management
strategy

Calories in, Calories out

Weight loss

Weight maintenance

Weight gain

Patients with NAFLD report eating 500+ additional calories per day

Diet composition per 1000 kcal

	NAFLD	Controls
Carb (g)	104	103
Protein (g)	36	35
Fat (g)	43	45
Sat fat (g)	18	18
Fructose (g)	10.5	10.3

Effective?

Most patients

~Half of patients

< Half of patients

Very few patients

Almost none

Meta-analysis

Effectiveness of behavioural interventions for weight loss

15 RCTs
4539 participants
≥12 mo f/u

-3.0 lb
(12 months)

-2.7 lb
(24 months)

“Our scale shows that you have gained 5 pounds since your last visit.”

“I don’t understand what I am doing wrong. I’ve been doing everything you told me to. I barely eat, and I’ve been walking very day!”

THE BIGGEST LOSER

Changes in The Biggest Loser participants

	Baseline	End of competition (30 weeks)
Weight (lb)	328 (+/- 89)	199 (+/- 54)

Metabolic adaptation

The slowing of resting metabolic rate that accompanies weight loss and is often greater than would be expected based on measured changes in body composition

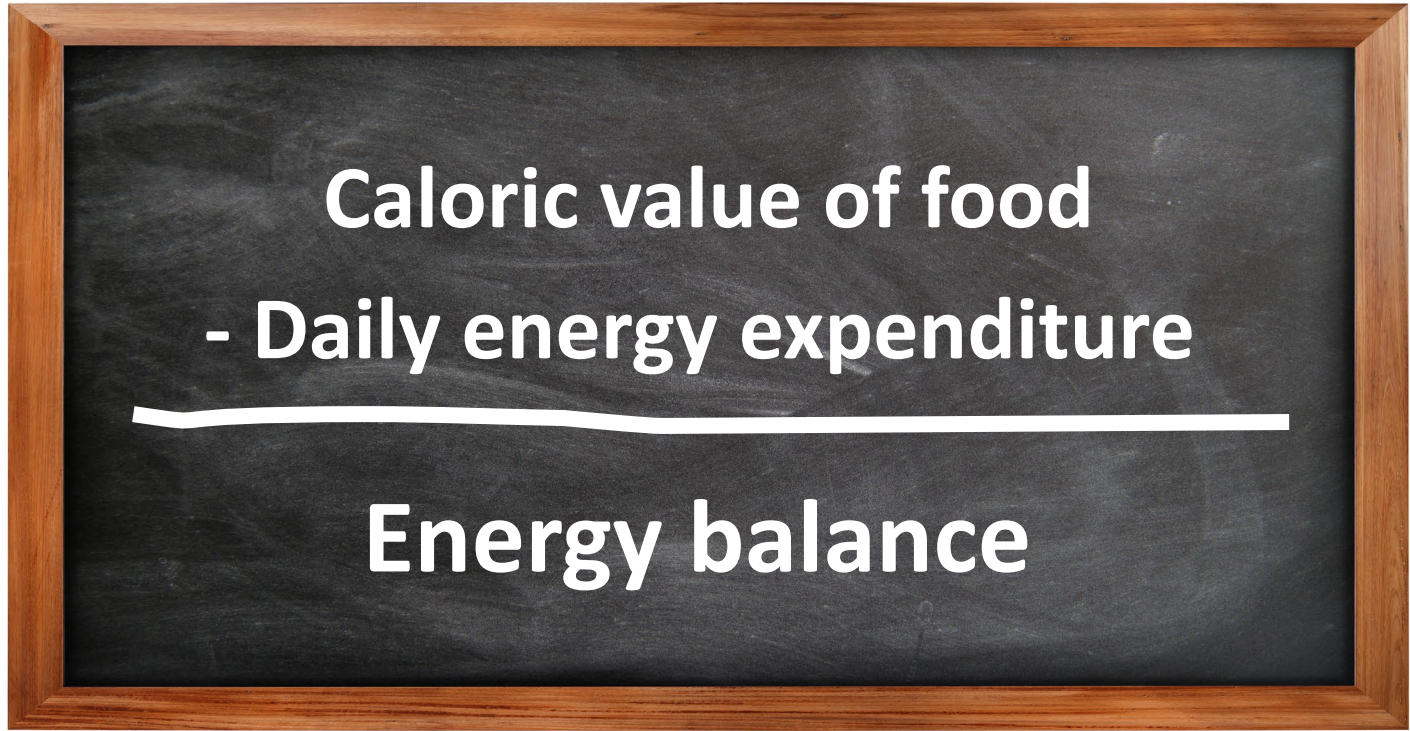

Metabolic adaptation in The Biggest Loser

	Baseline	End of competition (30 weeks)	Follow up at 6 years
RMR kcal/d	2,607	1,996	1,903

RMR

Metabolic
adaptation

Caloric value of food
- Daily energy expenditure

Energy balance

Weight loss

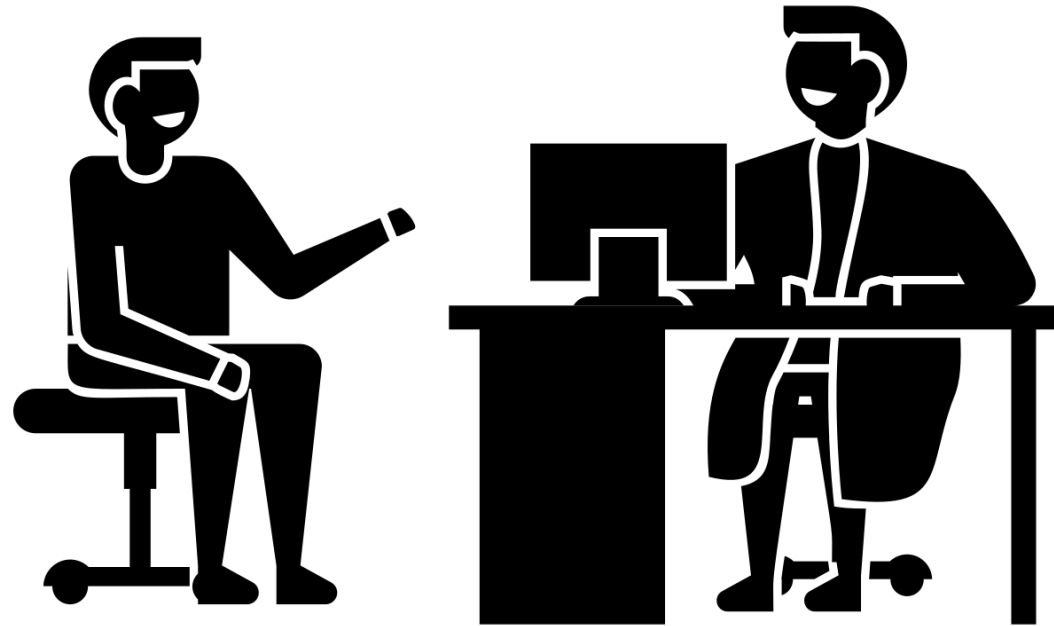

Weight maintenance

Weight gain

*“Lose weight by
eating less and
exercising more.”*

“I don't understand what I am doing wrong.”

“The first goal is to stop ongoing weight gain.”

Calories In

Food	Kcal
Bagel + cream cheese	380
Grande vanilla latte	250
Chicken breast	250
Banana	100
Orange juice (1c)	100
Pepperoni pizza	300
Red wine	125

Calories Out

Activity (per 30 min)	Kcal
Walk	100
Exercise bike	100
Playing with children	100
Doubles tennis	150
Gardening	100
Zumba	150-450

Quality

Timing

*Alternative eating strategies
for patients with NAFLD*

Diet Quality

“...a diversified, balanced and healthy diet, which provides energy and all essential nutrients for growth and a healthy and active life.”

Ultra-processed food

“Industrial formulations typically with 5 or more and usually many ingredients.
...include food substances not commonly used in culinary preparations whose purpose is to imitate sensorial qualities of unprocessed or minimally processed foods”

“food substance”

e.g., hydrolyzed protein, modified starches, and hydrogenated oils, and additives

“to imitate sensorial qualities”

e.g., colorants, flavorings, nonsugar sweeteners

Identifying ultra-processed foods

- 1) Wrapped in plastic
- +
- 2) Contains at least one ingredient that would not be found in a domestic kitchen

NOVA Food Classification System

Endorsed by the Food and Agriculture Organization of the United Nations

#4

ULTRA-PROCESSED

Many ingredients + food additives

Cold cuts
Soft drinks
Ice cream
Cereal
Hot dogs

#3

PROCESSED

Industrial products made using preservation methods such as canning, bottling, fermentation.

Bread
Cheese
Jam
Tofu

#2

PROCESSED CULINARY FOODS

Obtained directly from foods in group #1 and created by industrial processes (e.g., pressing, extracting, refining)

Oil, salt, sugar, butter

#1

UNPROCESSED / MINIMALLY PROCESSED

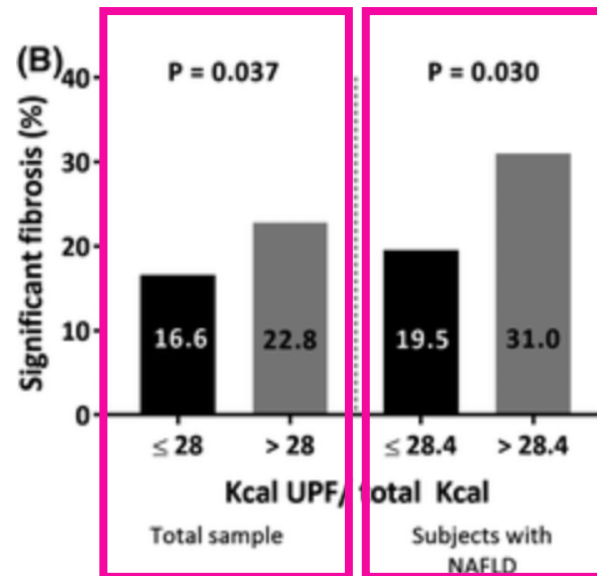

Vegetables
Fruits
Nuts
Meat
Milk
Eggs

Evidence : Ultra-processed food consumption and fatty liver

Rates of NASH

Higher fibrosis

- 800 patients
- Food frequency questionnaire
- Non-invasive test for fatty liver and fibrosis

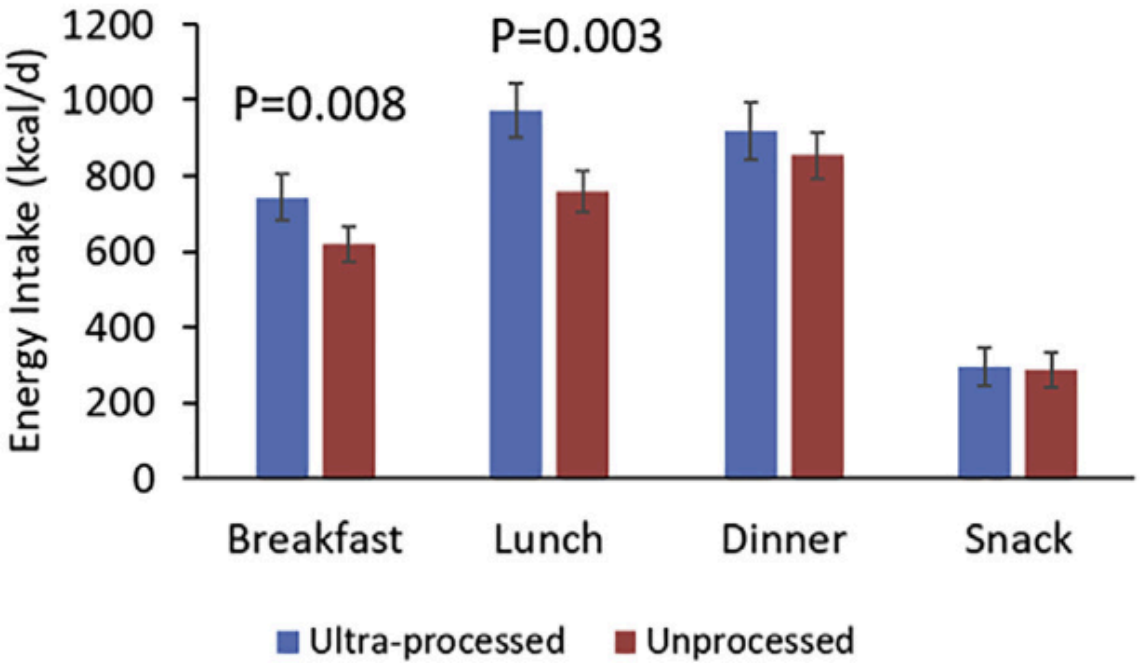

Ad-libitum diet study

- 20 healthy men and women
 - Mean age 31 years
 - Mean BMI 27 kg/m²
- NIH Metabolic Clinical Research Unit
 - 2 weeks
- Randomized to *ad libitum* diets
 - Ultra-processed
 - Not ultra-processed

Ultra-processed dieters ate more calories...

...at breakfast/lunch

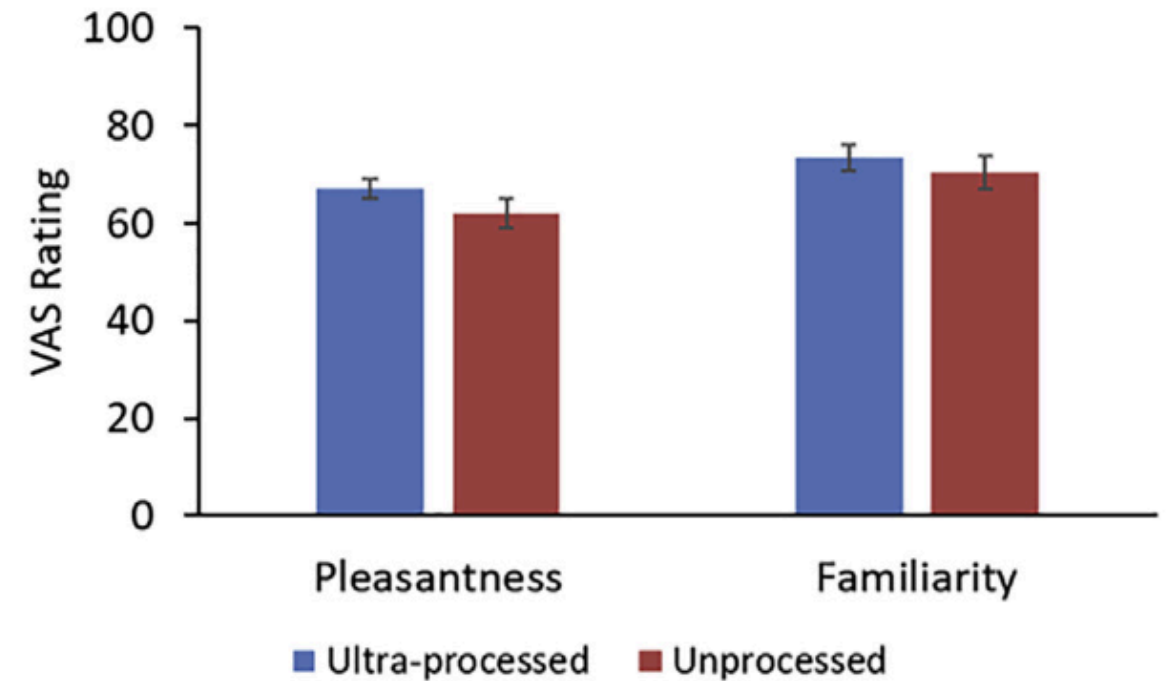

...and more efficiently

Patient-reported measures were similar

Appetitive measures, pleasantness, and familiarity

Fast-food diet study

- 18 healthy men and women
- Asked to eat 2 fast food meals per day for 2 weeks
- Alcohol consumption maintained at baseline

Food composition

	Before	Fast food diet
Total kcal	2273	5753
Energy from fat	36%	43%
Energy from carbohydrate	48%	45%
Energy from protein	16%	12%
Saturated fat, g/day	33 g	111 g
Sugar	95 g	285 g
Fiber	26 g	37 g

Changes before and after the fast food diet

	Before	After
Weight, kg	68 (9)	74 (11)
BMI, kg/m ²	22 (2)	24 (2)
ALT	22 (2)	69 (76)
Hepatic triglyceride content by MRS	1.1% (1.9)	2.8% (4.8)
Body fat	20% (10)	24% (9)

Strategy to reduce consumption of ultra-processed foods

Eat from a bowl, not a bag

Can I recognize where this food came from?

Would my great-grandmother recognize this food?

Shop the perimeter

Timing

Intermittent Fasting

A pattern of meal timing schedules that cycle between voluntary fasting and non-fasting over a given period of time.

Intermittent Fasting

COMMON METHODS

ALTERNATE DAY FASTING

Severe
restriction of
calories every
other day

E.g., Eating 500
calories every
other day

5:2 METHOD

Eat only 500
calories 2 days a
week, then normal
diet the other 5
days a week

E.g., eat a 300
calorie meal + 200
calorie meal

TIME-RESTRICTED EATING

Voluntary fasting
for at least 10
hours during set
windows every
day

E.g., 16/8, eating
between 12-8pm

Meta-analysis

Intermittent Fasting vs. “non-fasting” in patients with NAFLD

6 studies
417 patients

- Modest reduction in body weight
Mean difference -2.45 kg (-3.98 to -0.91)
- BMI -0.50 kg/m² (-0.93 to -0.07)

Mean difference
-11 (-14 to -7)

Mean difference
-11 (-14 to -8)

No significant difference in metabolic parameters
(waist circumference, fasting glucose, HOMA-IR, cholesterol)

Therapeutic Options for NAFLD

Liver-specific medications

Weight-loss medications

Metabolic bariatric surgery
